

February 2023

Welcome to Tummy Tamer, the Food Diary and Symptom Tracking app. Tummy Tamer is meant to be user-friendly and easy to use, but this User Guide will give an in-depth walkthrough of the app and its features for those that would benefit from it.

1 What Is Tummy Tamer?

Tummy Tamer (TT) is meant to help you uncover food sensitivities and triggers by making two things easy for you:

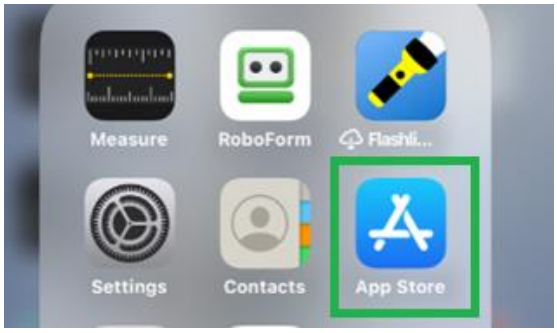

1) Entering your food, drink, and daily metrics.
2) Viewing historical data and charts to find trends and patterns.

Whether you're using the app your yourself to keep track of the effects of a new food plan (elimination, keto, carnivore, gluten-free, etc.), or you're using it to track symptoms of someone else (such as a child or nursing baby), Tummy Tamer is versatile enough for all your needs.

2 Downloading Tummy Tamer

Tummy Tamer is available on both iOS (via the App Store) and Android (via the Google Play store). The following instructions are for Apple Products. Android users can follow instructions from their Android devices to download Tummy Tamer from the Google Play Store.

1. Find your "App Store" icon. You may also swipe down on your home screen to activate the search tab, and search for "App Store."

2. Once you are in the App Store, search for Tummy Tamer. (You may have to enter your Apple password to access the App Store).

3. Touch “Install” and follow the instructions to install.

3 Free Trial Period

Everyone has a free 7-day trial period for trying out the app. During this time, there are no limitations to what you can do in Tummy Tamer. Our hope is that this trial gives you confidence that the app is worth the few dollars per month going forward.

Once your trial period ends, all your data is still available to view or generate reports from, but you will not be able to add any new information until you purchase a subscription plan (described further below).

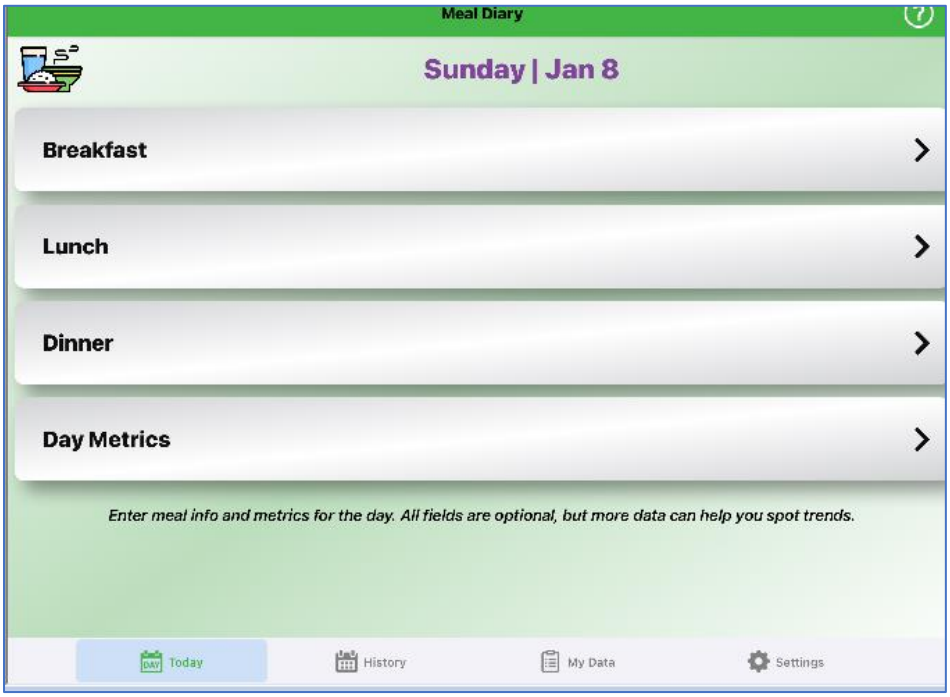

4 Introduction to this User Guide

The screenshots in this user guide are from an iPad, but the functionality and layout will be the same for whichever platform you are using (iOS or Android).

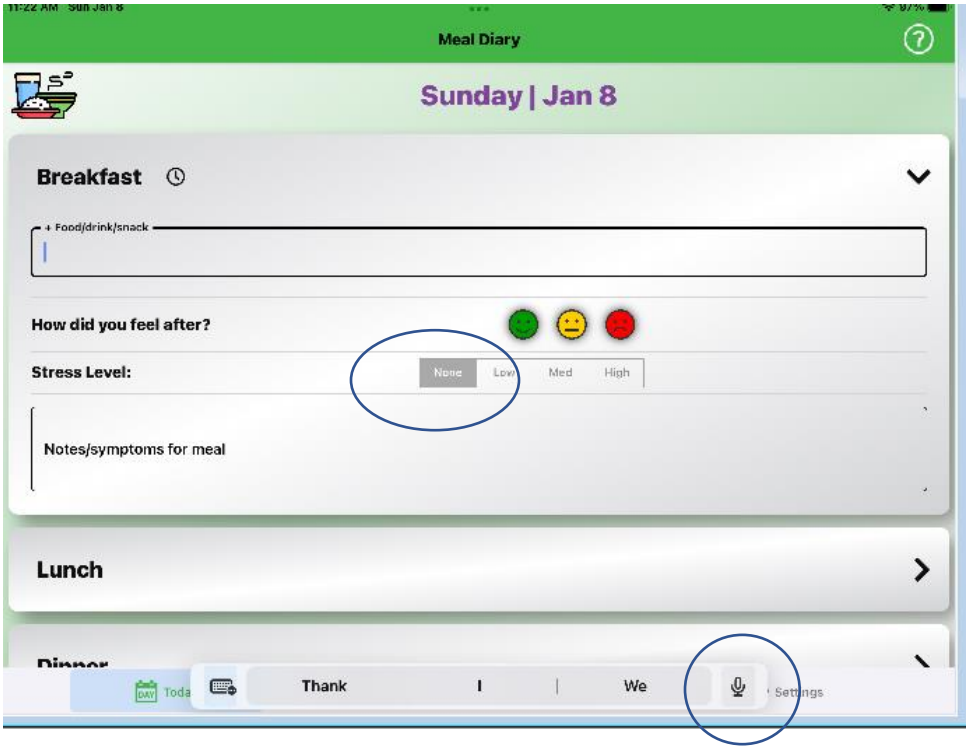

We have created test scenarios (and instructions) to describe how you can configure your version. Please note, the “data” that is in the scenarios was inserted using the microphone feature—no real need to type! It’s very easy to update your meals once you are familiar with the application.

Let’s get started.

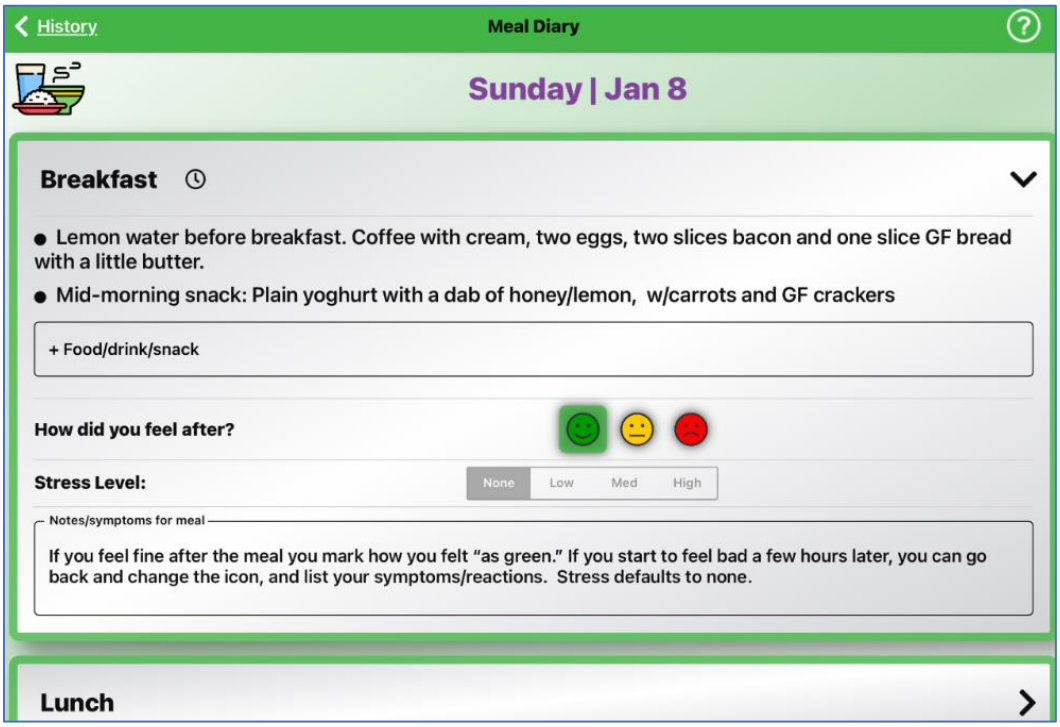

5 THE “TODAY” TAB

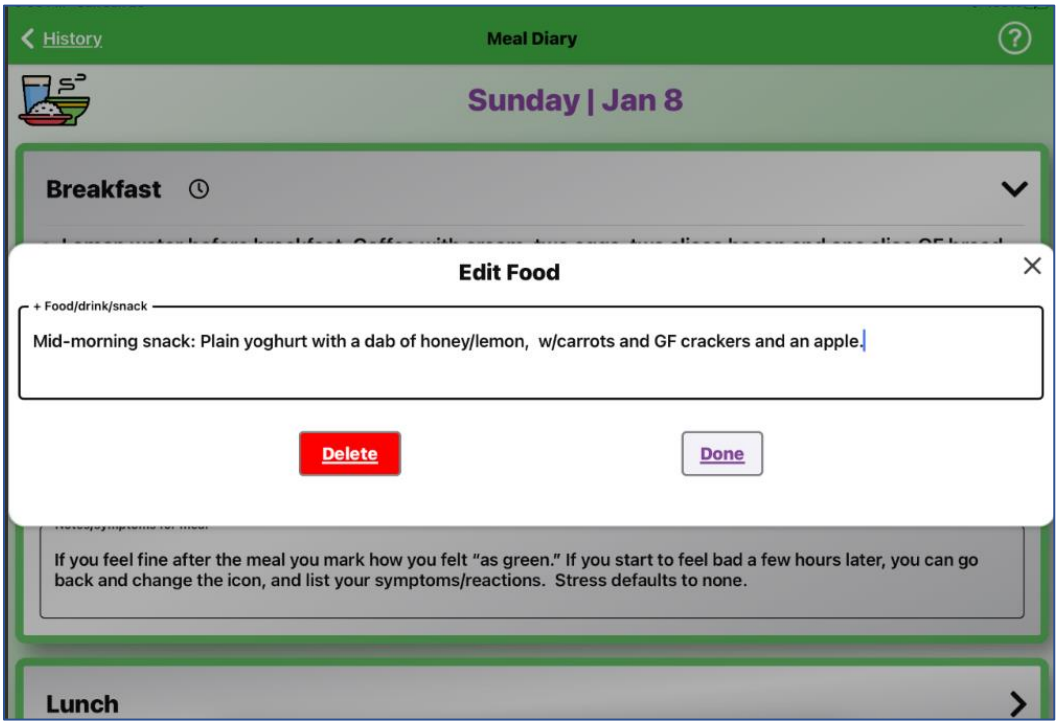

TT (Tummy Tamer) defaults to today’s meal update, on today’s date. We will discuss **History**, **My Data** and **Settings** screens later in this document.

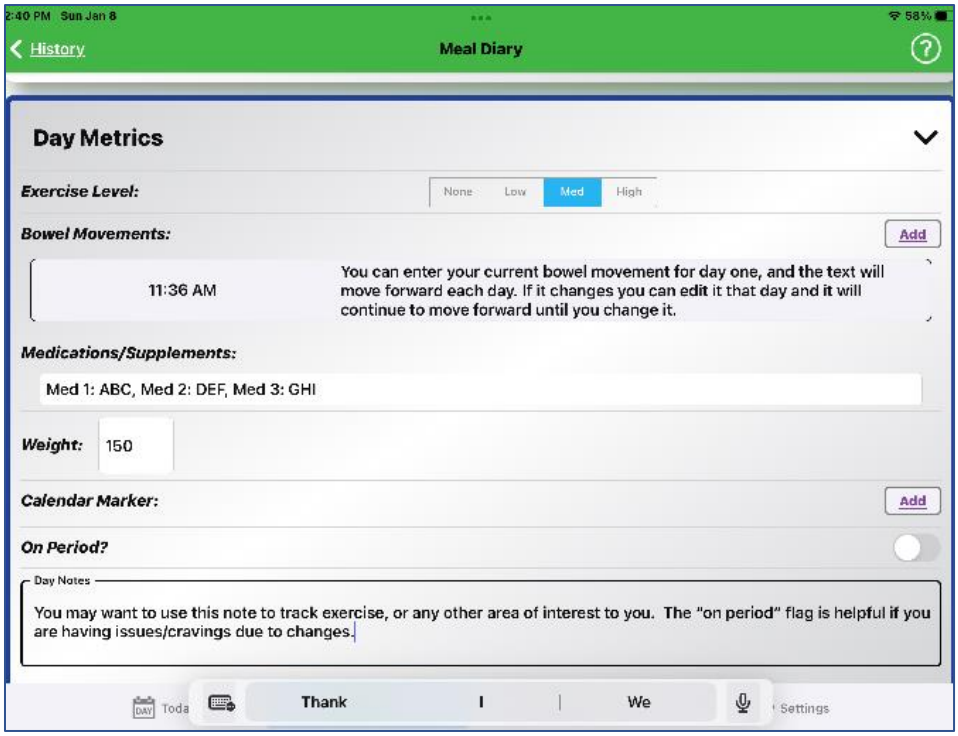

1. The cursor is already set to update breakfast. Simply tap the mic and you can start dictating your breakfast items. You can also add snacks later (put snacks with whatever meal they are closest to).
2. TT allows you to track how you feel after breakfast (e.g. the green smiley face) If you start feeling bad, you can come back to breakfast, change the icon color and dictate your symptoms, and the color changes on the report.
3. There is also a "stress level" indicator (which defaults to "none"). If you select a stress level, it will appear on the report.

4. You can also touch a meal (or snack) entry, and edit it if you made a mistake. (Example below).

5. In other text areas, (such as notes/symptoms) you can touch the area and tap to the area you want to repair (backspace) or insert, and hit "enter" when you are done.
6. Lunch and Dinner work the same way.

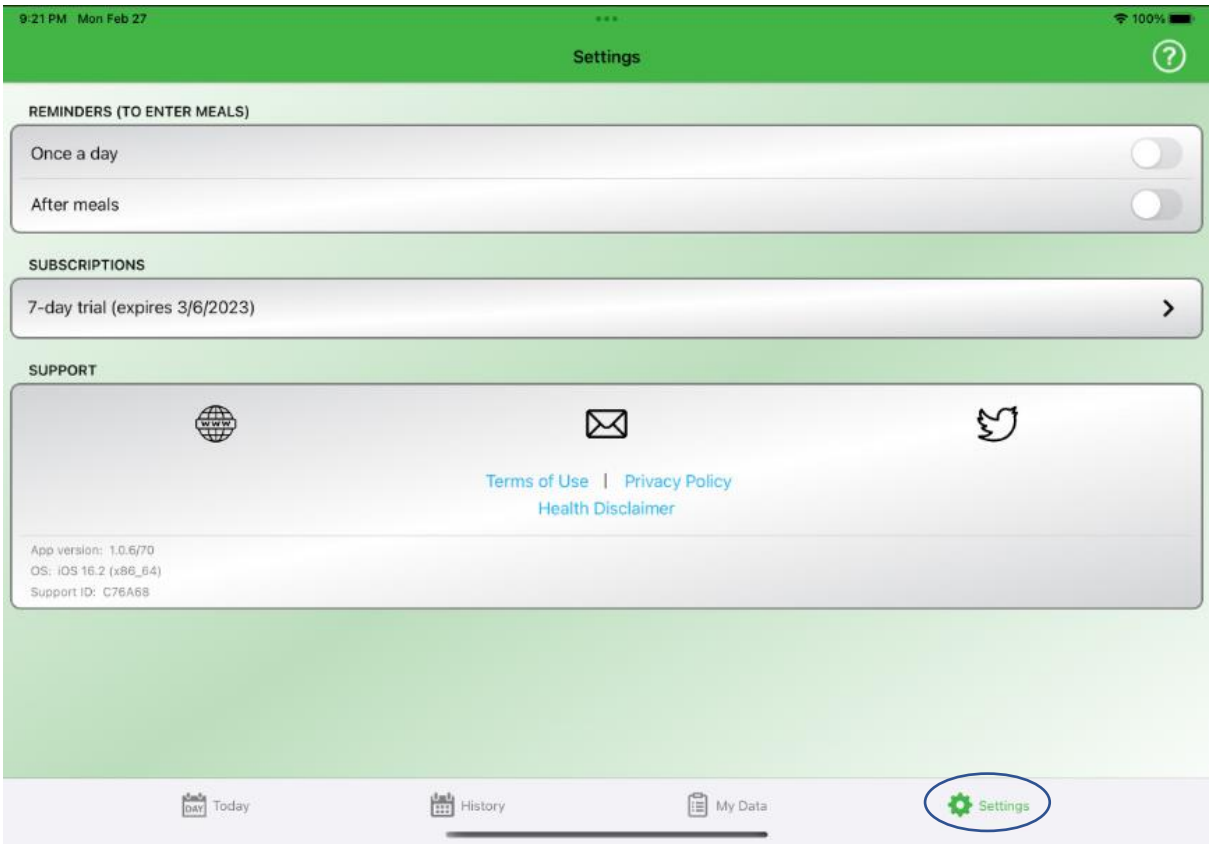

5.1 Day Metrics

Day Metrics helps you summarize daily areas that may affect your gut health: bowel movements, medication changes that affect your body etc. Everything is OPTIONAL, so you don't have to enter it unless it's important to you.

1. **Bowel Movement/Meds Updates:** for items such as bowel movements and medications, you can put in the initial information and the data will "move forward" so you don't have to type it in every day. If something changes (for example a bad day BM), you can change it, and then when you feel better change it back to normal.
2. **Athletes** who are using nutrition to enhance performance may want to use the **day notes** to track how well they do (or do not do) on their workouts based on the food eaten that day. You can also use "meal notes" to track issues other than meals, and it will show up on the reports.

6 The "Settings" Tab

Settings gives you the ability to set reminders, access more information, and get support if needed.

One feature of Settings is to set "reminders" to update TT. This feature is also used by parents tracking their child's reactions to food. For example, they can set the reminders to alert them two hours after their child normally eats, to see if any changes have taken place with their child.

6.1 Subscriptions Page (within Settings)

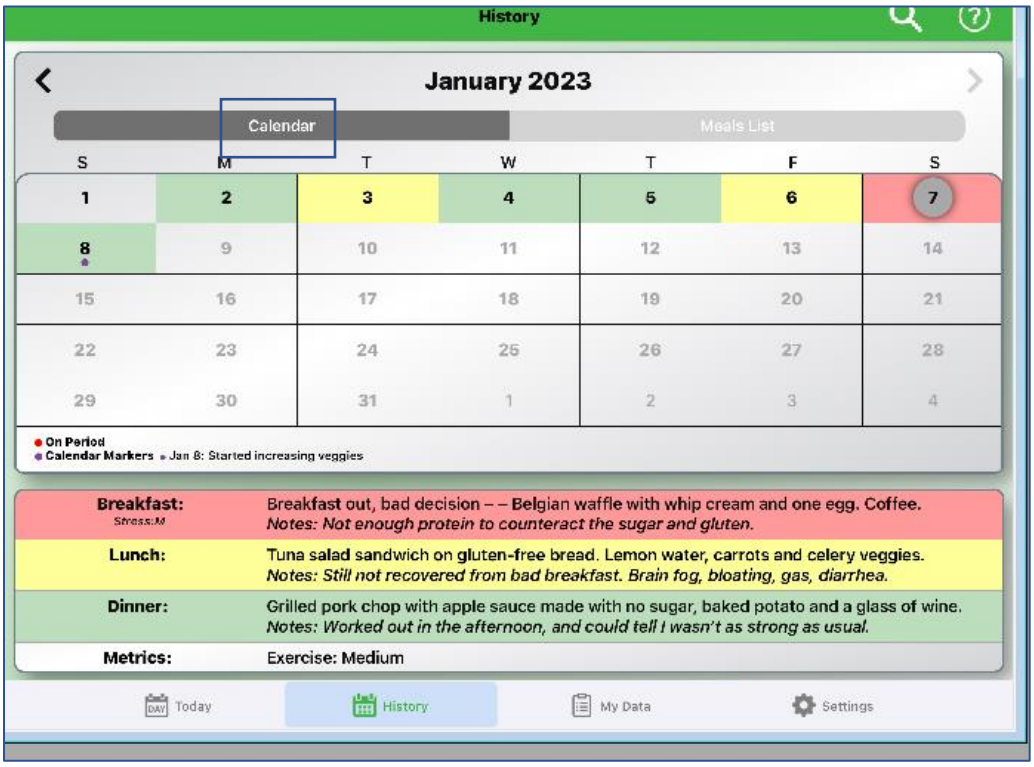

After the free 7-day trial expires, you have different options for continuing to use the app:

Duration	Cost (USD)
1-month	$2.99
3-month	$6.99
Lifetime	$24.99

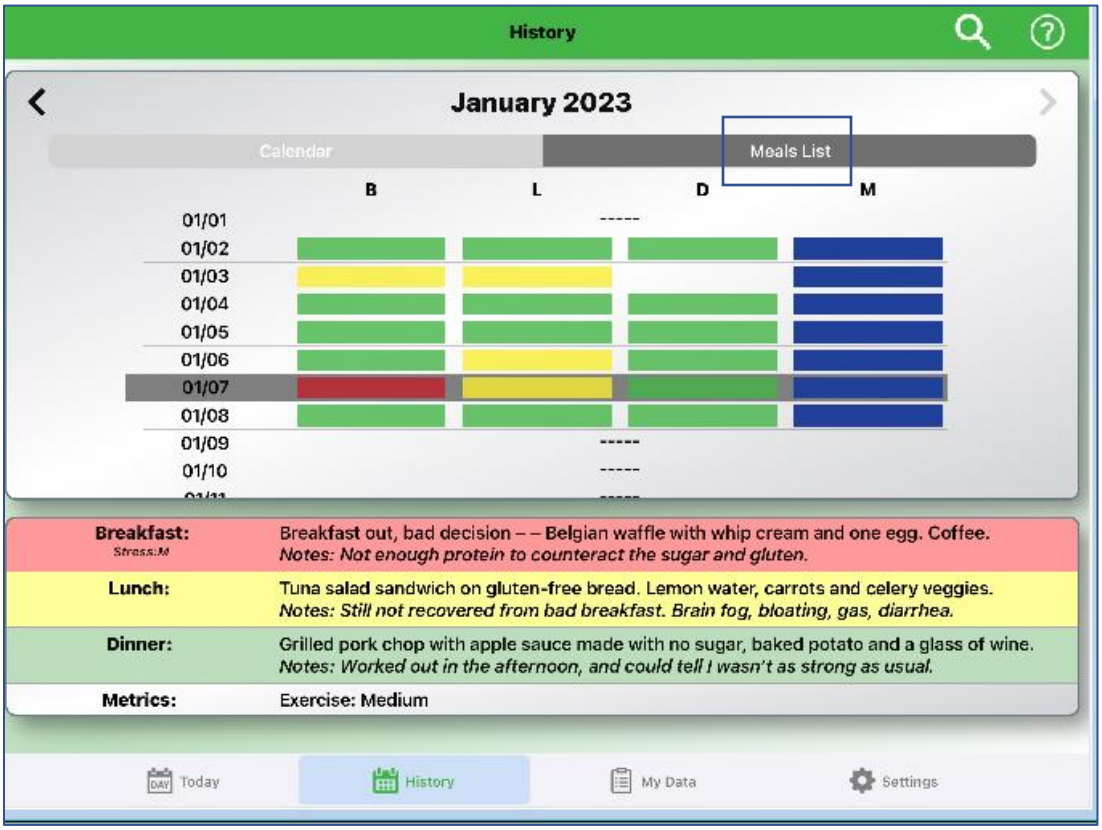

Subscriptions will auto-renew until you cancel. To cancel a subscription, follow the link on the Subscriptions page to learn how to manage subscriptions on your particular device. Note: subscriptions are managed through Apple and/or Google, not Tummy Tamer. Canceling a subscription must be done through those official channels.

7 THE "HISTORY" TAB

History allows you to go back to a previous day (or days) to update meals if you were not able to update meals on a particular day. It also helps show trends (and problems you may have had over the month). Example of a "bad day" (Calendar view) is shown below. On the calendar view, it shows you the "worst" color selected for a meal. Touching the "Meals List" tab shows the exact meal that had the problem.

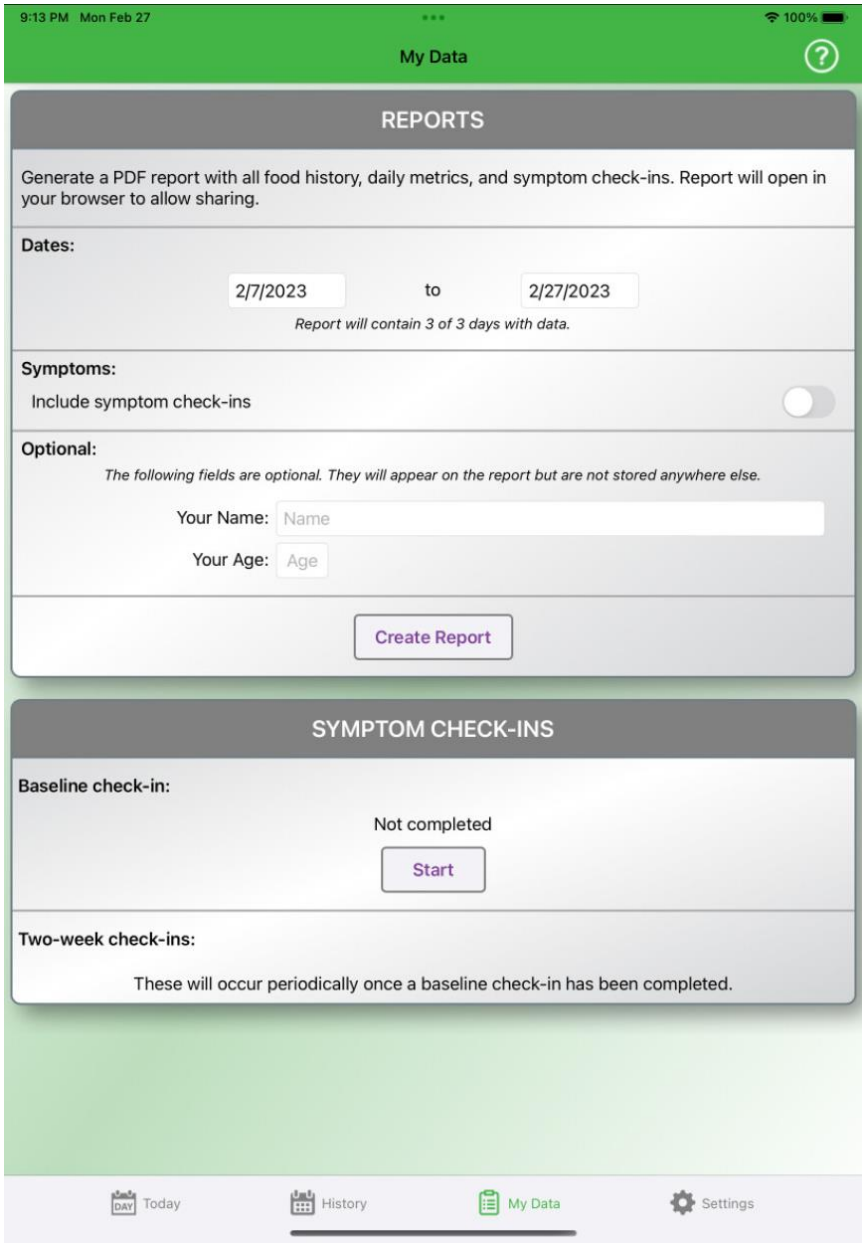

The "**Meals List**" history shows details (by meal) where you can easily see problem meals.

8 The "My Data" Tab

My Data is the area where you will create reports. You can filter for dates, and insert two-week check-in data (if you are working with a nutritionist who tracks your issues and symptoms).

1. When you select **"Create Report,**" TT creates the report, and you have the option of sending it to your email. If you plan to send this report to a Physician, Trainer or Nutritionist, you can put your name in and it will appear on the report.
2. "Include Symptom Check-ins" can be selected and it will list your status on two-week check-ins. You can also select custom days (such as two weeks or a month) of meals to appear on the report.
3. **Note:** This report on the next page was generated from an iPad. It was for a six- day period, and includes the check-in data. The report would look the same if it were generated from an iPhone. Again, speaking into the microphone was used to generate the data. No typing on small keyboards!

Tummy Tamer

Food Diary Report: Jan 02, 2023 - Jan 08, 2023

Symptom Checkins

Baseline Check-in (1/8/2023)

Initial Symptoms: When I eat sugar or wheat, I experience brain fog stomach upset food cravings especially for sugar – – and after two days of sugar or wheat I start noticing aches in my joints.

Known food allergies, sensitivities, intolerances, etc: Sugar, wheat, if I have a lot of milk the sugar in the milk causes stomach problems.

Current diets: Anti-inflammatory and higher protein diet

Existing diagnoses: Not officially, but my CRP number went from 6.9 to 2.1 after getting off sugar and gluten. And my joints felt so much better.

History (Calendar)

January 2023

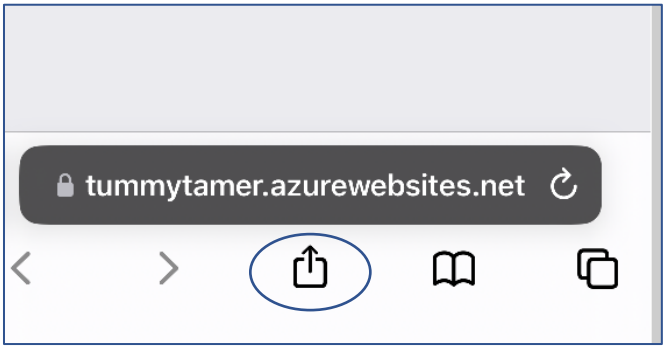

Jan 02	**Breakfast:** Lemon water pre-breakfast,Yogurt no sugar – blueberry oatmeal, latte.
	Lunch: Leftover Salisbury steak with risotto. Hot caffeine free tea and veggie sticks
	Dinner: Split pea soup with gluten free biscuit, ice water and big salad with blue cheese dressing.
	Day Metrics: Exercise: Medium | BMs: 11:36 AM You can enter your current bowel movement conditions, and your notes will move forward each day. If your BM changes you can edit it that day and it will remain until you change it again. | Meds/Supplements: Med 1: ABC, Med 2: DEF, Med 3: GHI
Jan 03	**Breakfast:** Breakfast out – bad choices – crème brûlée French toast with maple syrup and two eggs. *Notes: Felt OK initially. Two hours later started having the brain fog and stomach upset.*
	Lunch: Green salad with baked chicken and lots of veggies, lots of water. *Notes: Stomach is still upset from breakfast.*
	Dinner: Grilled salmon with brown rice and a sauce, not sweet, grilled zucchini, and a glass of wine. *Notes: After two meals I'm back to normal.*
	Day Metrics: Exercise: Medium | BMs: 11:36 AM Gas and diarrhea after breakfast bad decision meal. Didn't get back to normal until the evening.
Jan 04	**Breakfast:** Lemon juice, plain yogurt with blueberry oatmeal, latte. *Stress: Medium* *Notes: Selected medium stress to see how it shows up in the reports.*
	Lunch: Baked chicken thighs, big salad with basalmic vinegar not sweet, caffeine free tea
	Dinner: Beef and kale soup, salad with ranch dressing, ice water. •Evening snack with apple slices and Gruyere cheese
	Day Metrics: BMs: 11:36 AM Bowel movements back to normal after previous bad day, no constipation or diarrhea. | Meds/Supplements: Med 1: ABC, Med 2: DEF, Med 3: GHI
Jan 05	**Breakfast:** Lemon water,Leftover split pea soup, with lentil rice, latte. Lemon water,
	Lunch: Beef and tomato sandwich with gluten-free bread, and turnip slices.
	Dinner: Grilled snapper with brown rice and savory sauce from the snapper, salad with blue cheese dressing and a glass of wine.
	Day Metrics: BMs: 11:36 AM Bowel movements back to normal after previous bad day, no constipation or diarrhea.
Jan 06	**Breakfast:** Skipped breakfast—just coffee.
	Lunch: Ham and cheese sandwich, big salad with ranch dressing and decaf tea. *Notes: My workout was terrible I had no energy.*
	Dinner: Gluten free chicken fettuccine with light sauce, grilled zucchini, ice water. *Notes: Finally felt better in the afternoon from not eating breakfast and working out.*
	Day Metrics: Exercise: Medium | Day Notes: I can go back and add notes to a previous day if I realized I needed to add something.
Jan 07	**Breakfast:** Breakfast out, bad decision – – Belgian waffle with whip cream and one egg. Coffee. *Stress: Medium* *Notes: Not enough protein to counteract the sugar and gluten.*
	Lunch: Tuna salad sandwich on gluten-free bread. Lemon water, carrots and celery veggies. *Notes: Still not recovered from bad breakfast. Brain fog, bloating, gas, diarrhea.*
	Dinner: Grilled pork chop with apple sauce made with no sugar, baked potato and a glass of wine. *Notes: Worked out in the afternoon, and could tell I wasn't as strong as usual.*
	Day Metrics: Exercise: Medium
Jan 08	**Calendar Marker: Started increasing veggies**
	Breakfast: Lemon water before breakfast. Coffee with cream, two eggs, two slices bacon and one slice GF bread with a little butter. •Mid-morning snack: Plain yoghurt with a dab of honey/lemon, w/carrots and GF crackers and an apple. *Notes: If you feel fine after the meal you mark how you felt "as green." If you start to feel bad a few hours later, you can go back and change the icon, and list your symptoms/reactions. Stress defaults to none.*
	Lunch: A ham quesadilla with cheese and grain-free tortilla,with hot caffeine free tea. *Notes: You don't need to put in symptoms or notes relating to meals. Some customers are tracking their work out performance and want to tie it into nutrition. You can choose to use the notes field for specific issues relevant to your needs.*
	Dinner: Kung Pao chicken with veggies and brown rice, one glass of red wine. •TV snack of frozen blueberries.
	Day Metrics: Exercise: Medium | BMs: 11:36 AM Bowel movements are back to normal. | Meds/Supplements: Med 1: ABC, Med 2: DEF, Med 3: GHI

8.1 SENDING REPORTS TO YOUR EMAIL (TO FORWARD TO OTHERS)

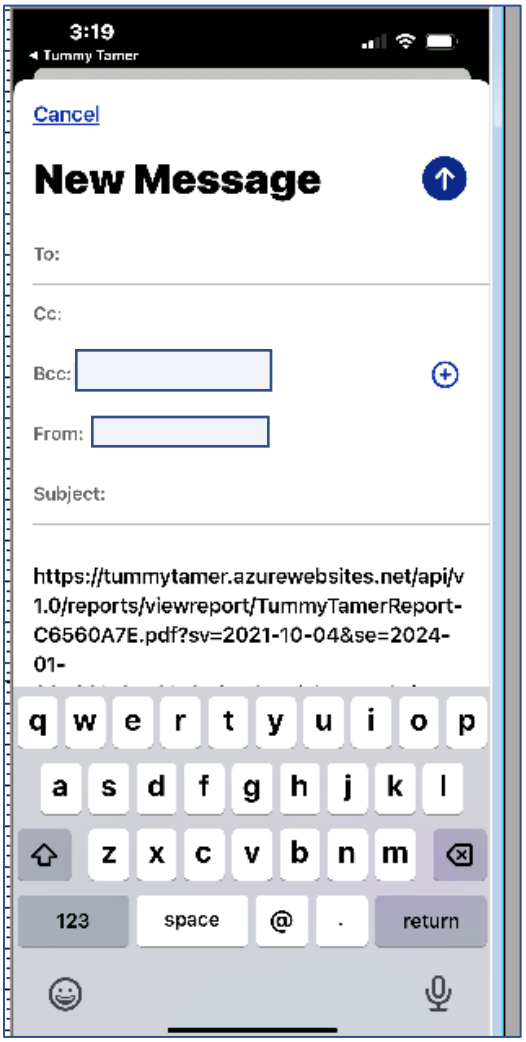

Using your iPhone:

1. Once the report generates, click on the circled icon at the bottom of the report (shown below):

2. You have several options, but most of you will choose “Mail.”

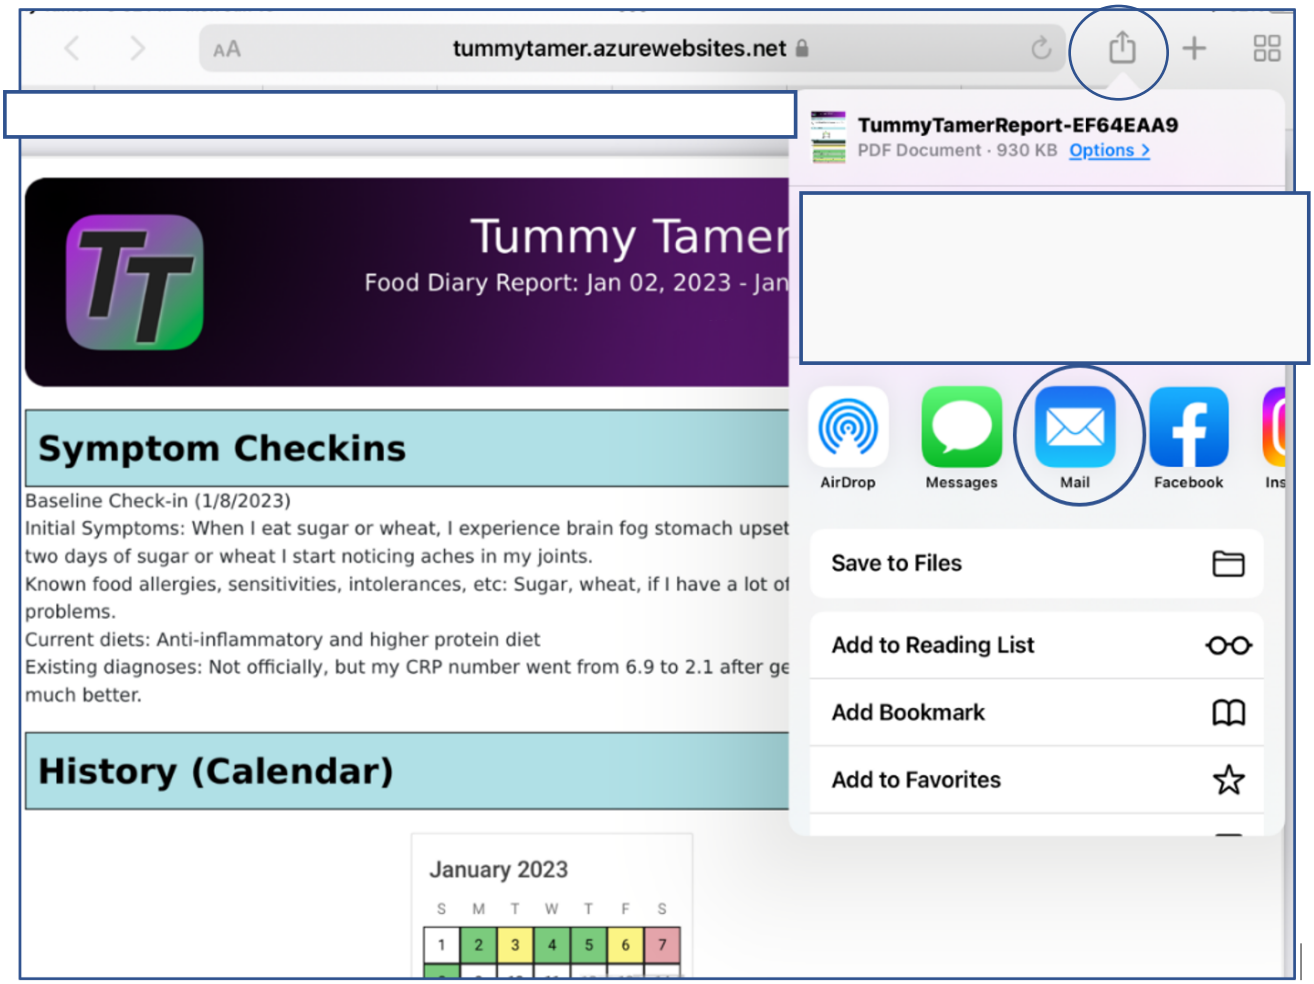

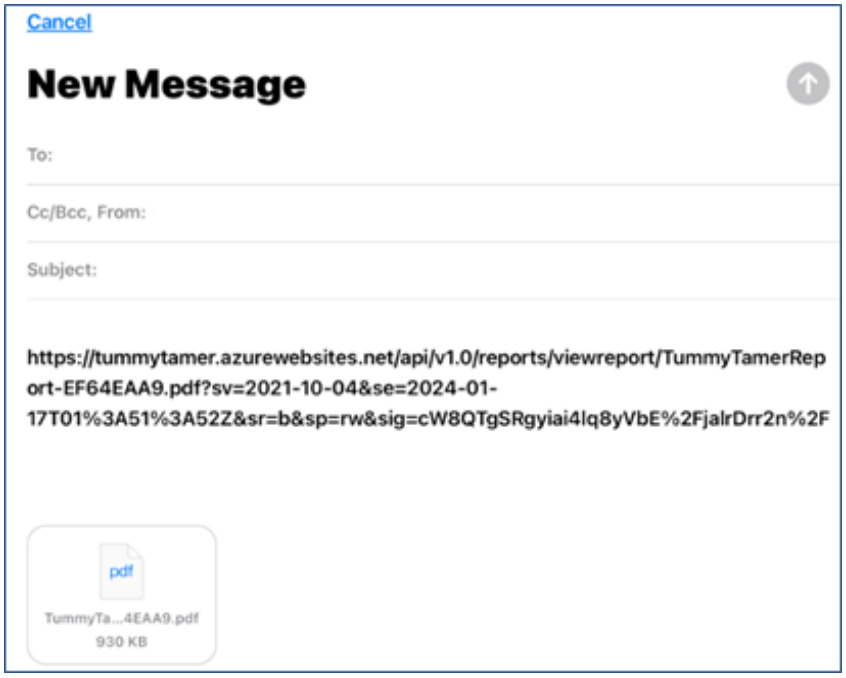

3. Enter your email address in the “to” area--and if you want to cc your trainer or nutritionist, you could add them as well. When you receive the email, click on the link to see (and print) the report if you want to share with others.

Using your iPad:

1. At the top of the report, tap on the “Share” icon circled icon below, then select “Mail” (this will be the most common way of sharing reports):

2. Once you tap on “Mail” you will get the following screen.

3. Enter your email address in the “to” area--and if you want to cc your trainer or nutritionist, you could add them as well. When you receive the email, click on the link to see (and print) the report if you want to share with others.

9 NEED HELP?

You can contact us through the Settings screen (web, email, or Twitter). We’d love to hear your feedback and suggestions on how to improve Tummy Tamer.

Good luck tracking those tricky tummy troubles!
